

Open and Affordable Dental and Braces®

Prescription Instructions

Amoxicillin/Clindamycin: Take as directed on the bottle until the antibiotic is completely gone. Unless directed otherwise, begin immediately after the procedure.

Peridex Oral Rinse: Start rinsing 48 hours after surgery, gently swish for 2 minutes and let rinse fall out of mouth.

Oxycodone and Motrin 600 mg: Alternate oxycodone and motrin every 3 hours. Start with oxycodone, 3 hours later motrin, etc.

**If Tylenol alone does not control your pain, you may take 1 Extra Strength Tylenol (500 mg) together with 1 Oxycodone (5 mg). Wait three hours and then take a 600 mg Motrin tablet. Alternate this pattern every 3 hours, alternating between Tylenol and Motrin. This allows for pain control every three hours while maintaining 6 hours between Tylenol doses and Motrin doses respectively.
